University

# No Canaries, no coalmines

Claire Warwick  
Professor of Digital  
Humanities  
Co-Director, Durham Institute  
for Data Science

a computer- generated public domain which has no territorial boundaries or physical attributes and is in perpetual use. ...[this] is growing at a rapid rate daily, is taking shape and direction as a consequence of the voluntary actions of its participants and, it is claimed, is not controlled by any single authority...

A word born from the dark visions of a science- fictional genius, now often used to describe a world brilliant with promise and fraught with peril....Dark and foreboding to some; Yet sparkling in the bright hopes of a new generation.

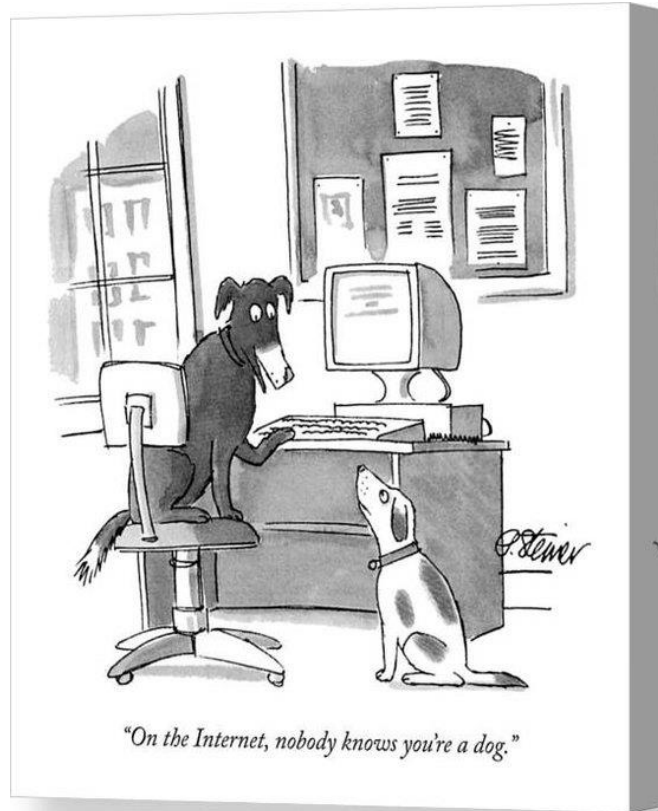

Its chambers bloom wherever data gatherers and is stored. Its depths increase with every image or word or number, with every addition, every contribution, of fact or thoughtful. Its horizons recede in every direction; it breathes larger, it complexifies, it embraces and involves.

# How it started....

# “Roadkill on the Information Superhighway”

## Teachers warned to be on lookout for victims of sextortion in UK schools

Teenage boys believed to be among most vulnerable to gangs using real and fake images to blackmail victims
